# Stickiness & Retention Recommendations

Ten opportunities to deepen engagement, build habits between casino visits, and turn TierTap from a session utility into a lasting player companion.

UI Evaluation · June 2026 · For presentation

# Where TierTap Stands Today

## Strengths (In-Session)

- Live Activity & Apple Watch sync during play
- Fast check-in presets for repeat visits
- Tap Level progression (1–1,000) with celebrations
- Play Reminders during live sessions
- Post-closeout confetti, session art & community publish
- Wallet tier sync toast at close-out

## Gaps (Between Sessions)

- No guided onboarding — splash → optional auth → Check In
- No logging streaks or consistency rewards
- No off-session push notifications or home screen widget
- History buried in a sheet; no journal-style tab
- Tier goals ephemeral — no persistent progress tracker
- Trips lack pre-trip prep and post-trip recap hooks
- Analytics empty until many sessions; insights are pull-only

## Core Opportunity

The biggest retention upside is **between-session value** — trip bookends, tier progress, monthly recaps, widgets, and a browsable journal — while keeping responsible-gaming framing (reward *tracking* and awareness, not more play). Apps like Strava, Duolingo, and Apple Fitness succeed by creating recurring reasons to open the app when the core activity isn't happening.

# 10

## **Recommended Enhancements**

Each recommendation includes the opportunity, a concrete proposal, inspiration from proven apps, and why it drives retention.

# 01

## ACTIVATION

# Guided Activation Onboarding

TIERTAP

### OPPORTUNITY

New users land on a large logo and "Check In" with no guided path. Wallet, bankroll, fast check-in, and analytics stay undiscovered unless users dig.

### RECOMMENDATION

Add a lightweight 3–5 step activation checklist on Home until complete:

- Link a wallet card
- Set bankroll
- Log first session & close out with tier points
- Configure one fast check-in preset

Effort: Medium

### INSPIRATION

**Duolingo** first lesson, **YNAB** setup wizard, **Notion** "Get started" checklist — all optimize for time-to-first-win, not feature tours.

### WHY IT STICKS

Users who complete one full session loop are far more likely to return. A checklist turns abstract value ("track tier points") into concrete, completable actions.

# 02 HABIT LOOP Tracking Consistency Streaks

## OPPORTUNITY

Tap Level rewards logging consistency and AI prompts mention streaks — but no visible streak system exists. Nothing celebrates "you tracked every session on your last 3 trips."

## RECOMMENDATION

Introduce **logging streaks**: consecutive casino visits with at least one logged session, or consecutive weeks with any session. Surface on the Tap Level card with a streak indicator. Optional gentle nudge before a planned trip.

Effort: Low–Medium

## INSPIRATION

**Duolingo** streaks, **Apple Fitness** "Close your rings," **Strava** "week active." Frame as discipline and record-keeping — not play frequency.

## WHY IT STICKS

Streaks are among the strongest habit loops in consumer apps — as long as they reward *tracking*, not gambling more.

## Persistent Loyalty Tier Goal Tracker

### OPPORTUNITY

Wallet tier sync shows a brief toast at close-out, then disappears. There is no always-visible "X points to next tier" progress anywhere in the app.

### RECOMMENDATION

Add a **tier goal ring** on Home and in Wallet: current points, next tier threshold, projected date at recent pace. Before trips: "At your usual pace, you'll reach [tier] by day 3 of Vegas."

Effort: Medium

### INSPIRATION

**Apple Fitness** activity rings, **Chase/Amex** rewards trackers, **airline status** progress bars.

### WHY IT STICKS

Tier progression is a core motivator for casino players. Making it ambient — not buried in close-out — gives a reason to open the app even when not playing.

# 04 EVENTS Trip-Mode: Pre-Trip Prep & Post-Trip Recap

TIERTAP

## OPPORTUNITY

Trips exist with AI suggestions, but no proactive hooks. Upcoming trips don't surface on Home; there's no post-trip summary or shareable recap.

## RECOMMENDATION

- **Pre-trip (7 days out):** Home card with countdown, fast check-in presets for that property, bankroll reminder, linked wallet cards
- **Post-trip:** Auto-generated recap — sessions, P&L, tier points, best/worst session, photo highlights. Shareable like session art.

Effort: Medium

## INSPIRATION

**Triplt** pre-trip alerts, **Spotify Wrapped**, **Strava** "Your week in sport." Casino trips are emotional peaks — TierTap should bookend them.

## WHY IT STICKS

Trips are natural re-engagement anchors: plan → play → reminisce. Three distinct open-the-app moments per trip.

# 05 RE-ENGAGEMENT

## Between-Session Notifications

TIERTAP

### OPPORTUNITY

Notifications today are in-session only (Play Reminders). Nothing pulls users back when they're home between casino visits.

### RECOMMENDATION

Add opt-in, value-driven pushes:

- Monthly recap ready
- Trip starts tomorrow
- Incomplete session needing close-out (Watch → iPhone)
- Tier milestone within reach
- Soft monthly check-in if no sessions logged

Effort: Medium

### INSPIRATION

**Strava** weekly summaries, **Apple Health** monthly trends, banking apps ("Your statement is ready").

### WHY IT STICKS

Most users aren't in a live session most of the time. Off-session touchpoints create habitual check-ins without requiring a casino visit.

## iOS Home Screen Widget (Off-Session)

### OPPORTUNITY

Live Activity and Watch complications work during play. There is no home screen presence when idle — no passive reminder that TierTap holds your data.

### RECOMMENDATION

Small/medium widgets showing: Tap Level + progress bar, next trip countdown, YTD tier points, last session result, or "Ready to check in?" with fast-check-in deep link.

Effort: Medium

### INSPIRATION

**Robinhood** portfolio glance, weather/calendar widgets, **Strava** weekly mileage widget.

### WHY IT STICKS

Widgets are passive billboards. Every phone unlock is a micro-reminder — without opening the app.

# 07 RETENTION Elevate History + Photo Feed to a Tab

## OPPORTUNITY

History is a sheet from Home; photo feed is a toolbar icon. `MainTab.history` exists in code but isn't wired to the tab bar. Past sessions are hard to browse.

## RECOMMENDATION

Replace or supplement a tab with **Journal** (History + Photo Feed + trip-linked sessions). Make revisiting past play as easy as starting a new session.

Effort: Low (mostly navigation)

## INSPIRATION

**Day One** journal, **Apple Photos** Memories, **Strava** activity feed. Emotional recall drives retention more than utility features.

## WHY IT STICKS

Users who build a rich history have high switching costs. A journal tab turns TierTap from a utility into a personal casino diary.

## Monthly "TierTap Wrapped" Insight Cards

### OPPORTUNITY

Analytics is powerful but empty until many sessions exist. Insights are pull-only; Pro AI analysis requires user initiation and a paywall.

### RECOMMENDATION

Auto-generate a monthly insight card on the 1st: sessions played, tier points earned, most efficient game, mood trend, biggest win/loss. Shareable image. Free = basic card; Pro = AI narrative summary.

Effort: Medium

### INSPIRATION

**Spotify Wrapped, Apple Music Replay, Strava Year in Sport, Monzo/Revolut** year-in-review.

### WHY IT STICKS

Creates a recurring calendar moment to open the app even in slow play months. Shareability drives acquisition loops too.

## Close-Out Completeness Score

### OPPORTUNITY

Tap Level scoring rewards tier gains and rated/actual bet alignment, but users don't know incomplete close-outs cost progression. History has verified vs. unverified tier tabs — data quality is a known issue.

### RECOMMENDATION

At close-out and on incomplete sessions, show: "+15 Tap Level progress available if you add ending tier + avg bet." A profile-strength-style meter on Home for data completeness.

Effort: Low–Medium

### INSPIRATION

**LinkedIn** profile strength, **Apple Watch** activity rings "close your move ring," fitness apps' form-quality scores.

### WHY IT STICKS

Turns data entry from chore into game mechanic. Better data → better analytics → more reason to return and explore insights.

## Smart Home + Reduce Auth & Social Friction

### OPPORTUNITY

Returning users with presets still see a large logo and generic "Check In." Auth is offered once per launch when unsigned in. Community is Pro-gated with an often-empty feed.

### RECOMMENDATION

- **Smart Home:** If fast check-in presets exist, make the preset bar the primary CTA; demote logo on repeat visits
- **Auth:** Prompt after value (e.g., 3rd session or first trip), not every cold launch
- **Community:** Read-only free feed or trip-buddy co-tracking; story-ready session art templates with deep links

Effort: Low–High (varies)

### INSPIRATION

**Uber** recent destinations home, **Instagram** share-to-stories flow, **Splitwise** trip groups.

### WHY IT STICKS

Every tap removed from check-in increases use at the high-intent moment (sitting at a table). Social and share loops turn solo tracking into identity and community.

## SUMMARY

TIERTAP

# Priority Matrix & Guiding Principle

| #  | ENHANCEMENT               | STICKINESS LEVER                     | EFFORT     |
|----|---------------------------|--------------------------------------|------------|
| 1  | Activation onboarding     | Time-to-first-value                  | Medium     |
| 2  | Logging streaks           | Habit loop                           | Low–Medium |
| 3  | Tier goal tracker         | Ambient motivation                   | Medium     |
| 4  | Trip prep + recap         | Event-based re-engagement            | Medium     |
| 5  | Off-session notifications | Pull-back                            | Medium     |
| 6  | Home screen widget        | Passive presence                     | Medium     |
| 7  | Journal tab               | Emotional retention / switching cost | Low        |
| 8  | Monthly Wrapped           | Calendar moment + virality           | Medium     |
| 9  | Close-out completeness    | Gamified data quality                | Low–Medium |
| 10 | Smart Home + social       | Friction reduction + loops           | Low–High   |

### Cross-Cutting Principle

Create recurring moments to open the app when casino play isn't happening. TierTap's in-session experience is already strong — the biggest upside is between-session value while keeping responsible-gaming framing: reward tracking and awareness, not more play.
